Data Source: Maine Mortality Database; Data, Research, and Vital Records Program, Maine CDC.

Unintentional and undetermined poisoning deaths are defined as death of a Maine resident for which the underlying cause of death is coded as X40-X49 or Y10-Y19.

Crude rates are deaths per 100,000 population.

Age-adjusted rates are deaths per 100,000 population age-adjusted to the U.S. 2000 standard population.

95% CI: 95% confidence interval of the rate.

NApp= Not applicable. Confidence Intervals are not calculated for rates of 0. Age-adjusted rates are not calculated for specific age groups.

*Rates are flagged as unreliable when the rate is calculated with a numerator of 20 or less.
